

- NOTES
- 1. 2A DRAW ON 5V, DO NOT USE ESP32 TO POWER
  - 2. 100uF and 10uF tantalum capacitors over 5V and GND
  - 3. For the module to start immediately when switched on, PWX is shorted to GND
  - 4. V\_TTL sets voltage of logic, 3V3 for ESP32 and 5V for Arduino UNO
